

Answers to Frequently Asked Questions for the Proposed Public Safety Building, Williamsburg, MA

Q25. Why are we not doing solar panels?

A. The OPM absolutely supports installing solar on the building and the building will be built to be able to allow this. However, before we can proceed, we need to know how much solar power is needed to support the building's needs. We need to understand the economics of solar on this building and how adding photovoltaic panels here will affect other renewable energy programs the Town currently has in place for town-owned buildings.
